

# Conti-Plus Metal Primer

**Conti-Plus Metal Primer is a solvent based steel substrate primer.**

## FEATURES

Continental Conti-Plus Metal Primer is a high-performance primer designed to prepare steel and other metal substrates for the application of protective lining systems. Formulated with a specialist blend of adhesion-promoting resins and anti-corrosion agents, it creates a strong, stable surface that maximises bond strength when paired with compatible rubber adhesives.

When applied to properly prepared metal, Conti-Plus Metal Primer forms a uniform, tightly bound coating that not only improves adhesion but also helps shield the substrate from corrosion during the lining process. This makes it an ideal first stage in equipment lining projects where long-term performance and structural integrity are critical.

The primer is easy to apply by brush or roller, allowing flexibility for both workshop and on-site applications. Its proven bonding performance ensures that rubber or ceramic linings remain securely attached, even under the heavy impact, abrasion, and vibration found in mining, quarrying, and material handling environments.

## AVAILABLE SIZES

PART NO.	DESCRIPTION	WEIGHT (EACH)
GLCSPP07	Conti Plus Metal Primer 0.75L Tin (10 Tins Per Box)	0.85 kgs
